Overview:

Developers can access and leverage the various technologies and tools that Government agencies have open-sourced. Our open-source tools include a wide range of products for areas such as digital identity, design and UI, and infrastructure-as-code.

We have also open-sourced some of the digital tools that we are using in our fight against COVID-19.

- TraceTogether** is a mobile application developed to support existing nationwide efforts to combat COVID-19 by enabling community-driven contact tracing using Bluetooth technology. TraceTogether is built on the [BlueTrace protocol](#). More information can be found [here](#).
- VigilantGantry** is an AI-driven automated temperature screening gantry that augments existing thermal systems to enhance the rate of contactless scanning. Find out more [here](#).

Our open-source technologies and tools

Apex API Gateway Apex is a Government API gateway that allows development teams to manage and share their application APIs securely. Apex is available on both internet and intranet environments. <ul style="list-style-type: none"> Node.js API signature library Java API signature library Node.js HTTP Proxy Server for attaching Apex authentication headers Apex API signature validator 	Infrastructure-as-code Infrastructure-as-code technologies allow development teams to define their application infrastructure through declarative configuration files. This allows teams to deploy their infrastructure more quickly and consistently. <ul style="list-style-type: none"> Terraform modules to host HashiCorp's suite of tools on AWS GovTech DSAIG's AWS Terraform modules GovTech GDS's AWS Terraform modules
Design and UI <ul style="list-style-type: none"> Singapore Government Design System, a UI component library to help web development teams build quickly with confidence. Purple hats is a customisable, automated accessibility testing tool that allows software development teams to assess whether their products are user-friendly to persons with disabilities (PWDs). 	National Digital Identity Libraries for integrating applications with the National Digital Identity platform. <ul style="list-style-type: none"> Node.js library for SingPass and MyInfo's OpenID Connect APIs Node.js library for SingPass and MyInfo's SAML APIs A wrapper around libant to perform authentication with CorpPass for Rack and Warden applications.
Sensors & IOT Software to support sensor and internet-of-things platforms. <ul style="list-style-type: none"> MANUCA OS, a functional real-time operating system for sensor node developers 	OpenCerts OpenCerts is a platform using blockchain to provide an easy and reliable way to issue and validate tamper-resistant certificates. TradeTrust is a digital utility that comprises a set of globally-accepted standards and frameworks that connects governments and businesses to a public blockchain to enable trusted interoperability and exchanges of electronic trade documents across digital platforms.
