Vice President
of Dep. e-Gov., NIA

A.I. Experience in Korea

Google DeepMind

Challenge Match

8 - 15 March 2016

AlphaGo

AlphaGo

Achievements and Challenges

Achievements

e-Gov. systems

18,434 systems

UN e-Gov. survey

Out of 193 Countries

1st	1st	1st	3rd
2010	2012	2014	2016

Online Services

Use of Open data

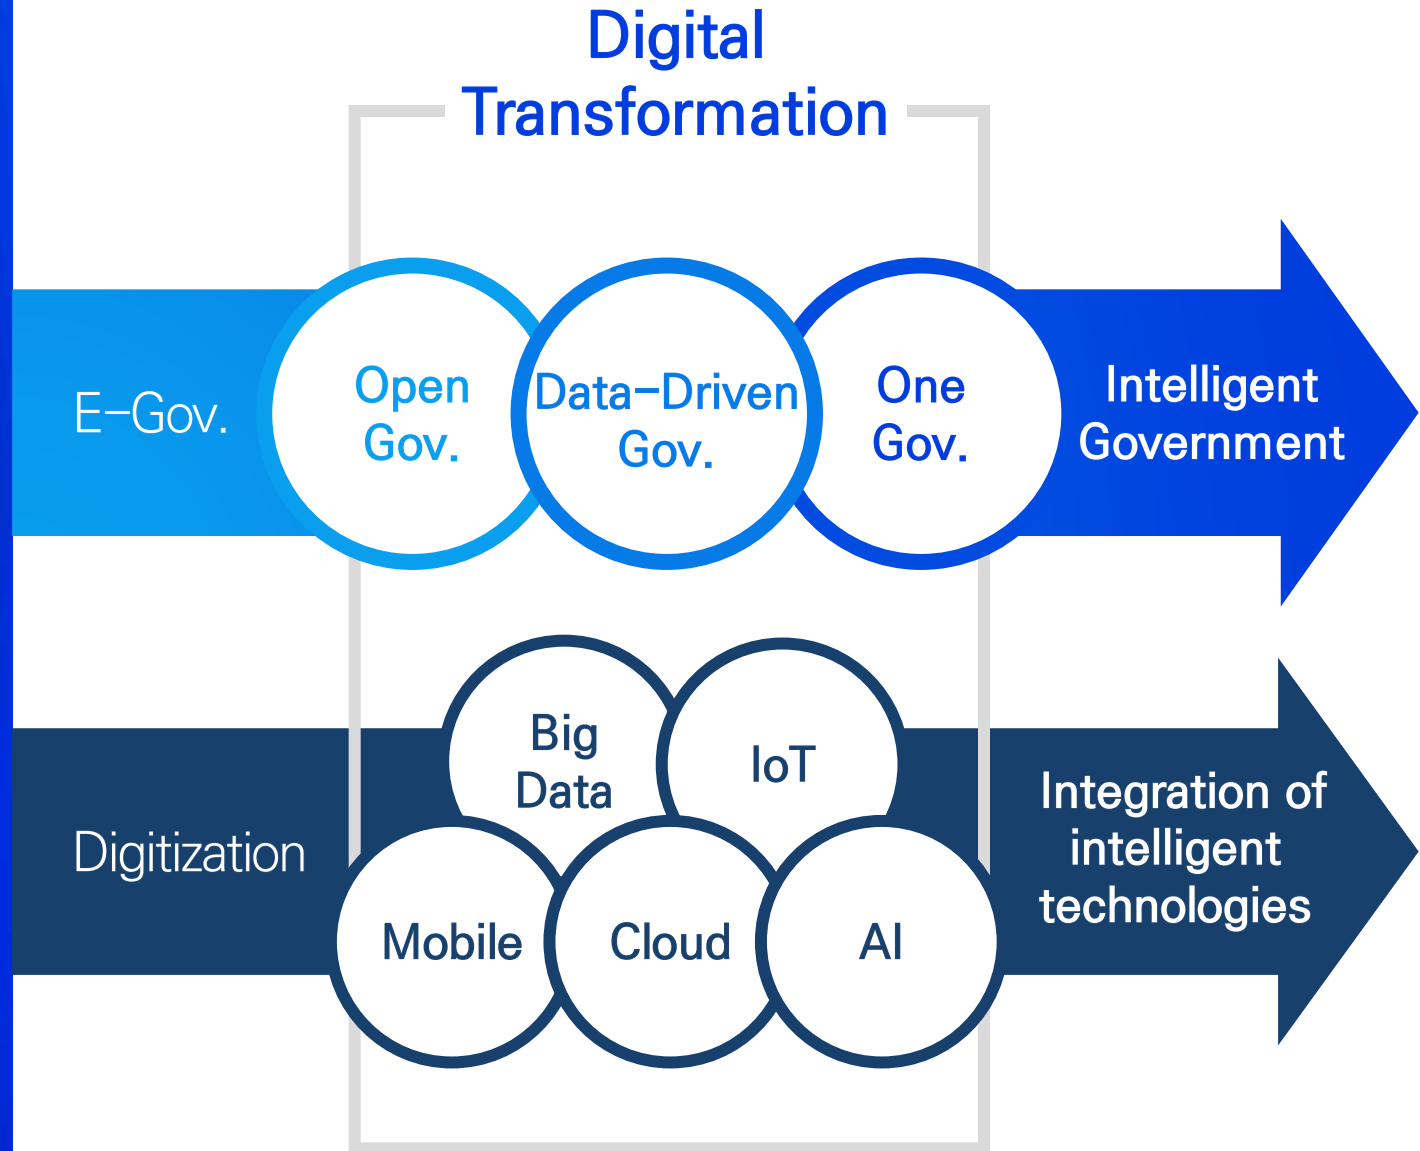

Number of data files

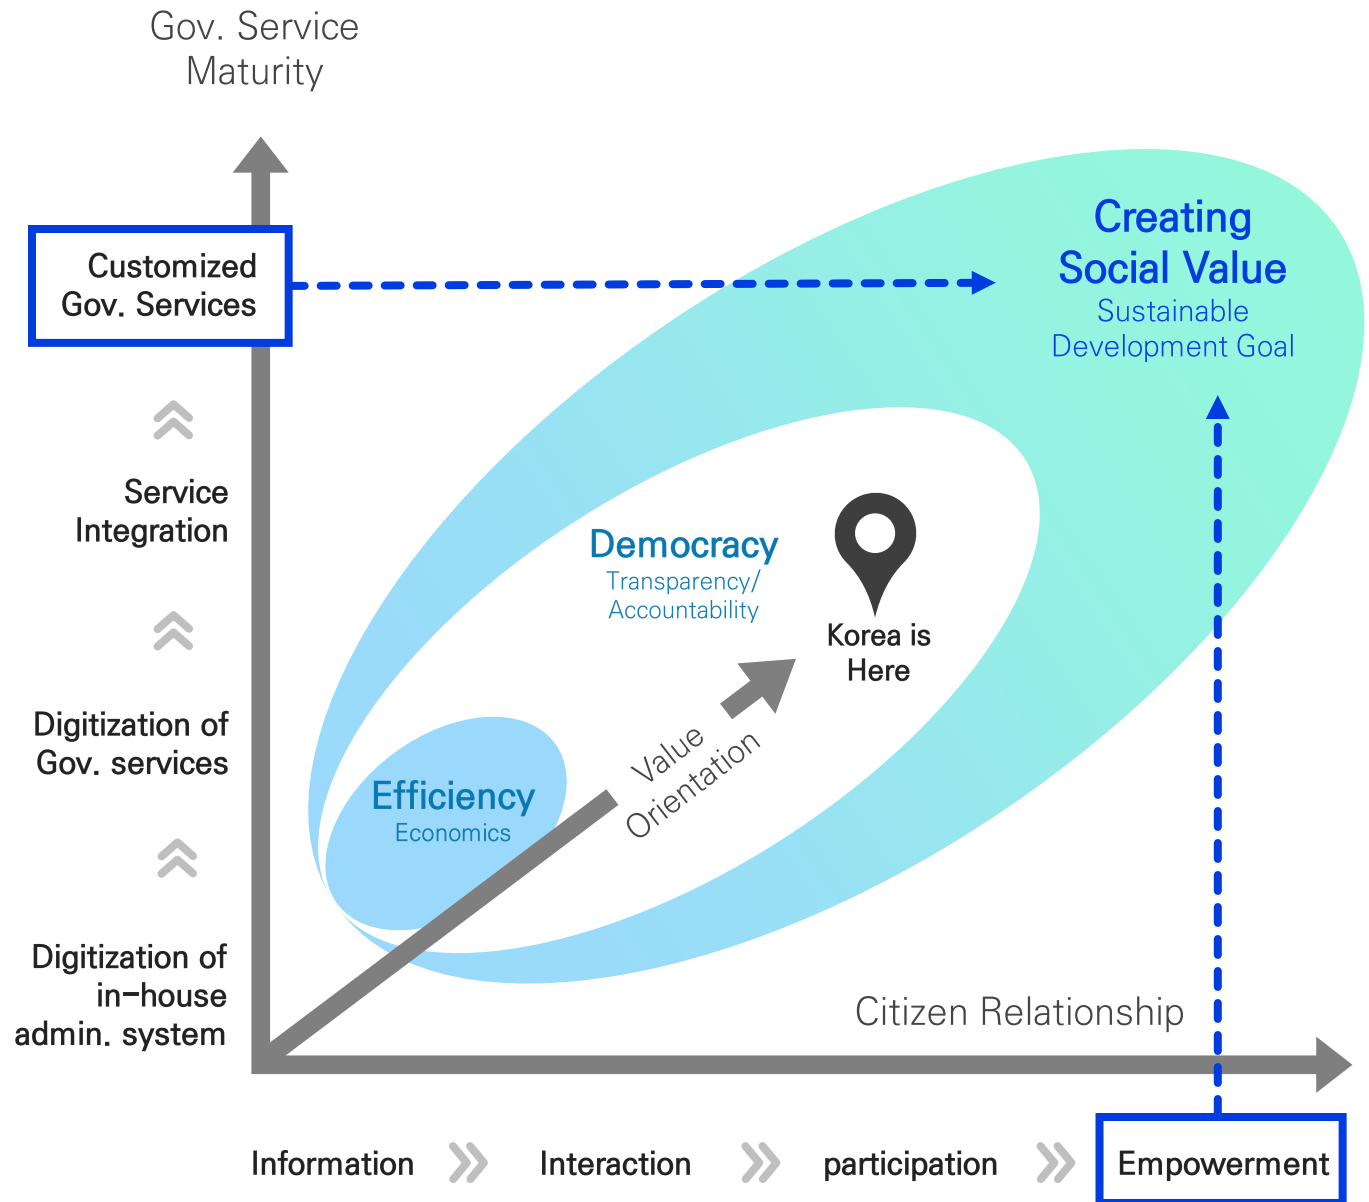

Limitations and Challenges

- ▶ Heavily focused on digitalization of existing work process
- ▶ Mainly provided with online web based in many cases
- ▶ Digital divide and unequal access to government services

Intelligent Government through Digital Transformation

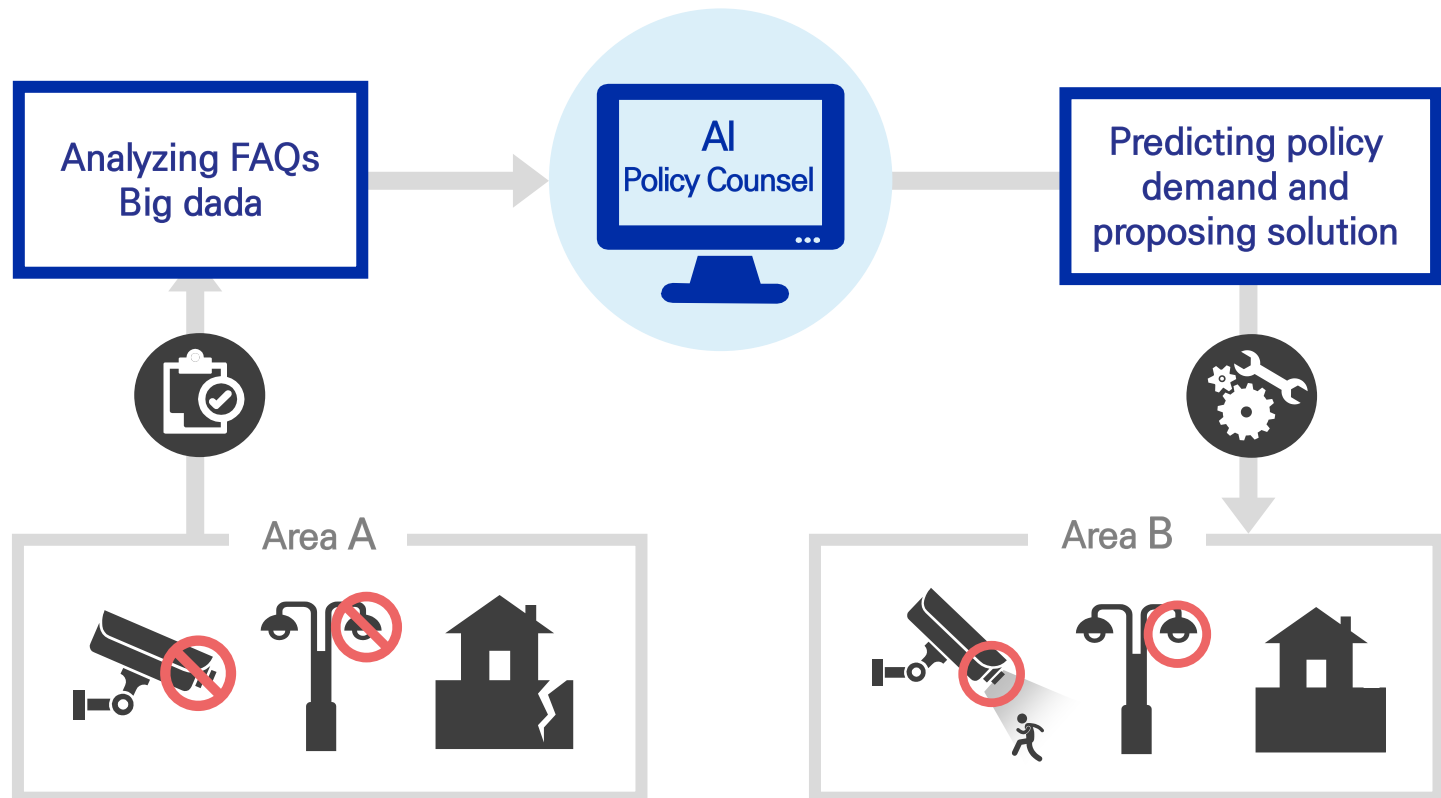

The Value and Goals of Intelligent Government

Project 1 Working Assistant for Public Servants : “A.I. Policy Counsel”

A.I. based e-Gov. systems analyze, study Gov. data, policy decision data, policy decision process in whole **answering common tasks like FAQs, predicting further policy demand and helping policy decision making**

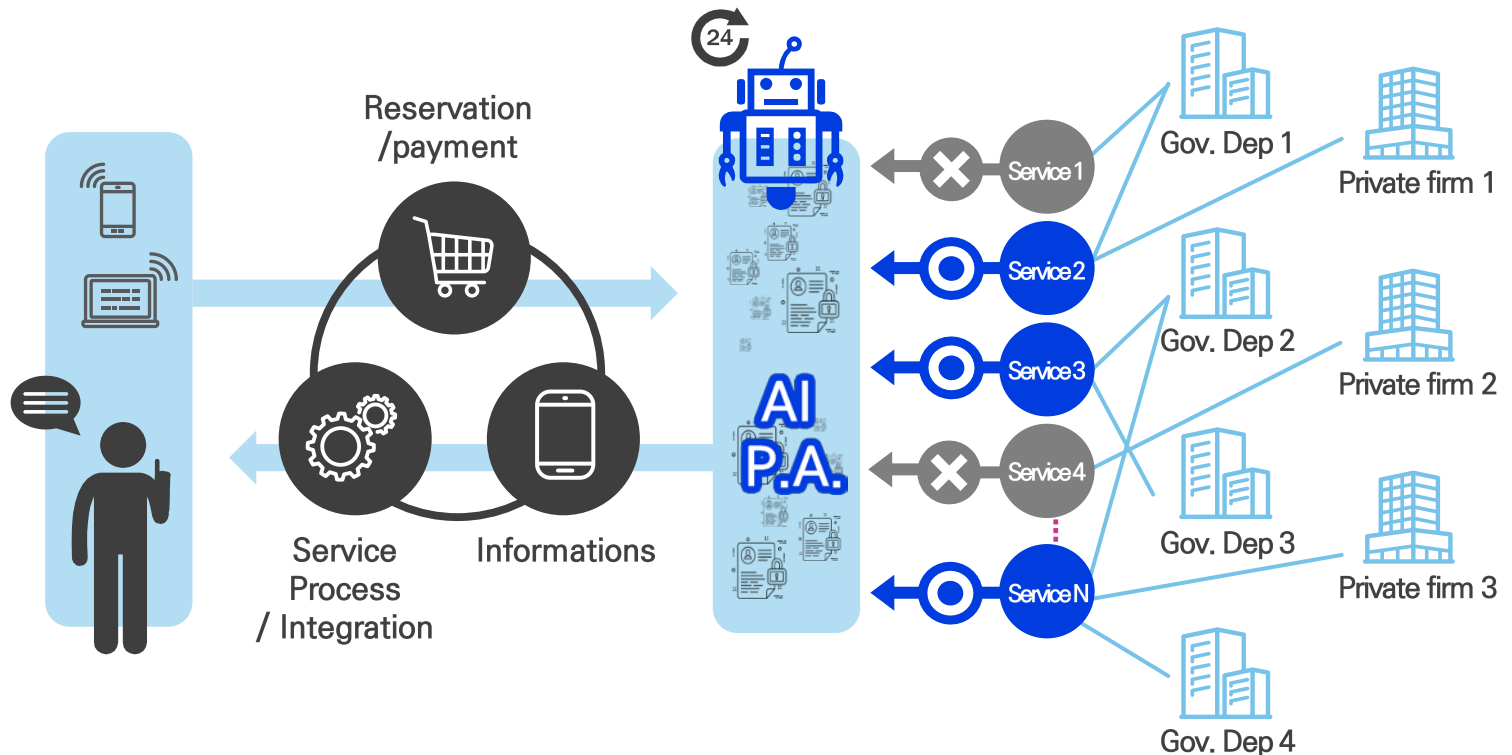

conceptual diagram (working progress)

Project 2 Digital Partner to the People : “A.I. Personal Assistant (PA)”

Regardless of on/offline, time, locations, devices, it analyzes personal demand, **predicts the user-specific service, and takes care of the necessary procedures according to the demand of the users.**

conceptual diagram (working progress)

Policy Issues to Intelligent Government

Expansion of **Open data** and **Quality** improvement

- ▶ Open data release reflecting social value
 - ▶ Reorganization of management system of national standard data
-

Private-Driven e-Gov. Services

- ▶ Drawing Private initiated service model and accordant improvement of procurement system
 - ▶ Establishment of Open Electronic Standard Platform Government
-

Setting up e-Gov. **guideline** for **A.I.** technologies

- ▶ Reforming e-Gov. Act reflecting tech. change
- ▶ Drawing social agreement and setting up e-Gov. guidelines for A.I. technologies
